

# README for “Present Bias Amplifies the Household Balance-Sheet Channels of Macroeconomic Policy”

## Overview

This replication package provides the Matlab and Stata code needed to reproduce the results in the article.

## Data Availability and Provenance Statements

- Survey of Consumer Finances (SCF)
  - The SCF data is downloaded directly in the code. Data can also be manually downloaded from <https://www.federalreserve.gov/econres/scfindex.htm>
- Federal Reserve Economic Data (FRED)
  - Data can be obtained from <https://fred.stlouisfed.org/>. Copies are provided as part of this archive for replication purposes. The specific series used are:
    - Monthly FRED.xls: GS10, MORTGAGE30US, MORTGAGE5US, TERMCBCCALLNS
    - Weekly FRED.xls: DFII10

## Dataset List

Data file	Source	Provided
SCF/data/p16i6	SCF	No (code downloads directly)
FRED/data/Monthly FRED.xls	FRED	Yes
FRED/data/Weekly FRED.xls	FRED	Yes

## Computational Requirements

The Matlab and Stata code used to generate the results in the article are uploaded to the repository.

### Software Requirements

- Matlab (code was run with Matlab release 2024a)
- Stata (code was run with StataSE 18)

### Memory and Runtime Requirements

- This code was run on an 8-core Intel-based PC with 320GB of RAM
- Each iteration of the model takes roughly 3 hours to solve
  - Some iterations can utilize pre-calculated data to run more quickly (see e.g. the variable HJB\_preSolved)

## MODEL: Description of Matlab Programs

(in the 'Matlab Model/' folder)

- Run `main_householdbalancesheet.m` to solve the model
  - The program is set up so that it runs the monetary policy experiment for the Exponential Benchmark
    - To run other calibration / simulation cases, the variables `calibrationCase` and `sim_case` need to be changed (further details provided below)
- Once all calibration/simulation cases have been run and saved in the output directory (saving is automatic), run `tables_figures.m` to produce the tables/figures in the paper
  - The 'main' code saves Matlab workspaces (.mat) to the output directory
  - The 'tables\_figures' code saves tables/figures to the figs directory
- The subfunctions directory contains additional Matlab scripts that are used when solving the model and/or simulating a specific shock. See in particular:
  - `model_calib.m` provides various model calibration cases (see variable `calibrationCase` in 'main' file)
  - `initialize_sim_case.m` provides various model simulation cases (see variable `sim_case` in 'main' file)

## EMPIRICS: Description of Stata and Matlab Programs

(in the 'Empirical Analysis/' folder)

- In the folder `SCF/`, run the file `scf2016_main.do` to download and analyze the 2016 SCF
  - The 'main' program calls `scf2016_dataclean.do`, which helps process the data
  - The 'main' code produces the file `SCF_results_16.xlsx`, which stores the output used to calibrate our model
- In the folder `FRED/`, run the file `FRED_analysis.m` to process the interest rate data used to calibrate our model
  - The output used to calibrate our model is reported directly in Matlab

## MODEL: Instructions to Replicators

- To begin, note that descriptions and codes of simplified stopping-time problems are available at <https://benjaminmoll.com/codes/>
  - See in particular [http://benjaminmoll.com/liquid\\_illiquid\\_numerical/](http://benjaminmoll.com/liquid_illiquid_numerical/) as well as the corresponding code currently located at [https://benjaminmoll.com/wp-content/uploads/2020/06/liquid\\_illiquid\\_LCP.m](https://benjaminmoll.com/wp-content/uploads/2020/06/liquid_illiquid_LCP.m)
- The file `main_householdbalancesheet.m` needs to be run separately 38 times under the following specifications. Note that `sim_case = 0.0` and `sim_case = 0.2` are the benchmark monetary and fiscal shock experiments. The other `sim_case` setups are for various extensions. The following order is recommended:<sup>1,2</sup>

---

<sup>1</sup> This exact order is not needed, but some runs are dependent on others. Changing the order may cause errors.

<sup>2</sup> For researchers with the available RAM, some cases can be run simultaneously to speed up computing time.

- calibrationCase = 1 (Exponential Benchmark)
  - sim\_case = 0.0 (Benchmark Monetary Policy shock)
  - sim\_case = 0.2 (Benchmark Fiscal Policy shock)
  - sim\_case = 0.1
  - sim\_case = 0.51
  - sim\_case = 0.52
  - sim\_case = 0.7
  - sim\_case = -1.25
  - sim\_case = -1.251
  - sim\_case = -1.252
  - sim\_case = 1.25
  - sim\_case = 1.251
  - sim\_case = 1.252
  - sim\_case = 2
  - sim\_case = 2.1
  - sim\_case = 2.2
- calibrationCase = 2 (Present-Bias Benchmark)
  - Run the 15 sim\_case iterations again exactly as specified just above
- calibrationCase = 3 (Intermediate Case: Exponential + Procrastination)
  - sim\_case = 0.0
  - sim\_case = 0.2
- calibrationCase = 4 (Intermediate Case: Exponential + Rational Inertia)
  - sim\_case = 0.0
  - sim\_case = 0.2
- calibrationCase = 5 (Intermediate Case: Present Bias + No Procrastination)
  - sim\_case = 0.0
  - sim\_case = 0.2
- calibrationCase = 6 (Intermediate Case: Present Bias + Rational Inertia)
  - sim\_case = 0.0
  - sim\_case = 0.2
- Once all of the above 38 iterations of main\_householdbalancesheet.m have been run, then running the code tables\_figures.m will produce the figures/tables in the paper and appendices

## EMPIRICS: Instructions to Replicators

- Running SCF/scf2016\_main.do produces an excel file titled SCF\_results\_16.xlsx that stores the output from the 2016 SCF used to calibrate our model
  - Note that the SCF provides SAS code to produce variables for their Bulletin articles, and our Stata code draws heavily from this SAS code
  - See <https://www.federalreserve.gov/econres/files/bulletin.macro.txt>
- Running FRED/FRED\_analysis.m produces (directly in Matlab) the interest rate wedges and dynamics that we use to calibrate our model

## List of Tables and Programs

For our Matlab model, tables and figures are produced by running the file tables\_figures.m. Note that tables\_figures.m assumes that all calibration / simulation cases have already been run and saved (details above).
